

Breno França Alcaraz Ferreira

Data Science & AI Student | Technology, Data and AI for Business

Rio de Janeiro, Brazil | brenofafrj3@gmail.com | linkedin.com/in/breno-frança-alcaraz-ferreira | github.com/BrenoAlcaraz | brenoalcaraz.github.io

SKILLS

AI: Generative AI, prompt engineering, agents and workflows/harnesses

Data: Python, SQL, Excel, Power BI and Power Query/Dataflow

Development: Git/GitHub, APIs, Postman, Power Automate, Power Apps and SharePoint

Product: Requirements gathering, business rules, workflows, UX and problem solving

EDUCATION

B.Sc. in Data Science and Artificial Intelligence

IBMEC - GPA 8.44/10

2023 – 2026 (expected)

CERTIFICATIONS

Applied Machine Learning in Python - University of Michigan

Exploratory Data Analysis for Machine Learning - IBM

Model Context Protocol: Advanced Topics - Anthropic

Fundamentals of AI Agents in GitHub - Microsoft

Financial Markets - Yale

LANGUAGES

Portuguese: Native

English: Fluent

Spanish: Advanced

French: Basic

PROFILE

Data Science and Artificial Intelligence student at IBMEC (GPA 8.44/10), seeking a Technology job applying data, automation, and AI to solve business problems. I have delivered solutions that cut manual processes from weeks to minutes in corporate environments, and I apply generative AI and agents today to build a personal SaaS product from the ground up through user validation — without limiting myself to a single technical track.

PROFESSIONAL EXPERIENCE

Process Automation Intern | MRO Logística

Jul 2025 – Jun 2026

- Built dozens of Power Automate flows and Power Apps/Python applications, integrated with Microsoft 365, SharePoint, and APIs, automating bureaucracy that used to be fully manual across areas like HR and IT.
- Delivered an automation that cut a critical process from weeks of a dedicated team's work down to a few minutes, and designed a standalone system to automatically manage Microsoft license assignment for the IT team.

Process Automation Intern | Along Contabilidade

Feb 2025 – Jun 2025

- Built Python scripts and applications to eliminate manual work and process data — including information extracted from blockchain networks — consolidating records into Excel and databases.
- Automated manual accounting processes that used to take weeks or months, cutting execution time down to minutes or hours.

Teaching Assistant, Structured Programming & Discrete Mathematics | IBMEC

Aug–Dec 2023 & Jan–Jul 2026

- Supported students in developing programming logic, Python skills, and discrete math foundations, translating technical concepts into practical solutions.
- Strengthened communication, teaching ability, and structured problem-solving across two semesters as a teaching assistant.

PROJECTS & INITIATIVES

AI-Powered Legal SaaS | Personal Project

Ongoing

- Building a SaaS platform for law firms from the ground up, applying generative AI, agents, and workflows to specify, build, validate, and evolve the product.
- Also defining requirements, business rules, workflows, and architecture — combining technology and product thinking in an independent, end-to-end initiative.

Freelancer & Nexus Fit | Independent Initiatives

Ongoing

- Working as a freelancer in web development and automation, quickly picking up new tools and technologies.
- Contributing to Nexus Fit, a live fitness app, with technical and product input, alongside independent content and sales initiatives.
